

New : The Floppy Sprinkler

Waterman Irrigation is pleased to announce the agreement with Floppy Sprinkler of South Africa for the distribution of this truly remarkable sprinkler.

Using the unique floppy silicon tube design, the sprinkler delivers full droplets to the crop at a controlled flow rate which is responsible for an extraordinary application efficiency of 89% (Water Research Commission of South Africa)

Additional research done at the Water Corporation of Western Australia confirmed the controlled flow above 150 kPa and that, should there be a water saving rating for sprinklers, this one would get 3 stars.

- Creates full droplets that are less affected by wind
- No misting so less evaporation
- Throws droplets up to 7 m away
- 5 year warranty
- Flow controller allows fertigation through steady flow between 200 and 400 kPa
- No metallic parts suits harsh water conditions

- No impact forces allows the installation on 4 m tall risers or suspended above the ground on a cable structure
- Available in a domestic version (green)
